

## ANNEXURE:2: QUERRIES AND ANSWERS THROUGH VARIOUS WAYS:

Queries addressed by our centre are diverse. For example, we receive queries on vernacular names and botanical names correlations, commerce, cultivation ,propagation, research material requirement, list of conservation concern species, traded species, inventories, checklist, job opportunities, research avenues, lab test, herbarium related queries, about folk and home remedies, establishing home and institutional herbal gardens etc. This tabulation gives examples of queries we receive through query module.

These are from registered users. This is one of the mechanism through which we receive queries.

### Tabulation of querries received through module:

S l . N o .	q_id	email	subject	query_text	answer	Nature of querries

27.	100 000 161 5	FAMA SH201 0@GM AIL.C OM	BAVAN CHI SEEDS	WANT TO SELL BAVANCHI SEEDS IN TONS,PLS.SEND ADDRESSES FOR SELLING OF ABOVE SAID SEEDS	Thanks for writing to us. I will forward your request to pharmacy.	pharmacy
28.	100 000 154 4	dgbabu _68@y ahoo.co .in	botanica l name requeste d	<p>Flowering Trees Mar 23rd, 2008 by karthik</p> <p>Bangalore's charm as a Garden City may have diminished. However, some of the trees that perhaps earned its name are still to be seen and cherished. For those of us who would want to simply immerse ourselves in that moment appreciating the beauty of each of these flowering trees that dot Bangalore it really does not matter ...we will continue to do so. For those who would want to know more information about these trees, I have tried to put together some information and pictures for 26 species that are often seen. Eventually, I hope to add more species to this list. Hope you find it useful.</p> <p>(Updated)Click here to download the PDF</p> <p>Gliricidia sepium: Common Name : Gliricidia, Mother of Cocoa, Quick stick (Jamaica) Origin : Pacific coast of Mexico and Central America Flowering Season :February-April Vernacular Name : Gobbarada mara</p> <p>Brief Description : A small, deciduous, ornamental tree, planted in gardens and fields as a green manure tree. The tree is leafless when in flower and bears fruits during April and May. The small flowers (barely 2cm long) are pale pink and they are borne in dense clusters on bare twigs. Flowers fade to white / faint purple with age. It can be used as an ornamental. The flowers attract a lot of bees and some lycaenid (Blues-Family Lycaenidae) butterflies – particularly the Peablue <i>Lampides boeticus</i>. There are several of these trees in Lalbagh, Cubbon Park, other gardens and a few along roadsides.</p> <p>Castanospermum australe: Common Name : Black Bean or the Moreton Bay Chestnut Origin : Coastal rainforests and beaches in Australia Flowering Season :February-March Vernacular Name : None</p> <p>Brief Description: This is a handsome tree with glossy dark green leaves and low spreading branches when grown in the open. It bears sprays of red and yellow pea-shaped flowers (about 3 to 4 cm</p>	<p>Good initiative. Please check with the publication dept.for a CDROM- titled- Neighbourhood medicinal plants of Bangalore city. Published by FRLHT, Bangalore Contact medplan@frlht.org, for sale copy</p>	Publications

## ANNEXURE:2: QUERRIES AND ANSWERS THROUGH VARIOUS WAYS:

			<p>long), which are partly hidden by the dense foliage. The nectar produced by the flowers attracts birds, bats and butterflies in its native land. Large woody pods (measuring 12-20cm by 4-6 cm) are produced following flowering. The pods look like large groundnuts. These pods split in two, revealing 2-4 large bean like seeds. The tree is known to contain alkaloids that have been shown to have anti-HIV and anti-cancer properties.</p> <p>It is an ideal shade tree in parks, resorts and gardens. It is known to have a strong root system, which can be used to consolidate stream banks against erosion.</p> <p>There are several of these trees in Cubbon Park (the road leading into Cubbon Park opposite old Tiffanys), near the High Court (near the statue of Sir Mark Cubbon), Lalbagh, her gardens and a few along roadsides. Peltophorum pterocarpum</p> <p>Common Name :Copper Pod Origin :Ceylon, Andamans, Malaya and North Australia Flowering Season :March – September Vernacular Name :Haladi Gulmohur</p> <p>Brief Description: The Copper Pod is considered to be a semi-evergreen tree. It is seldom leafless though it sheds leaves en masse during the winter months for a very brief period. The name 'Copper Pod' comes from the coppery-red seed cases that are seen in profusion (they turn black with age).</p> <p>A species which is easy to propagate, hardy, and can survive in harsh conditions. A pretty sight when in bloom. It bears clusters of yellow flowers at the end of the branches, together with dark green leaves. The ground under the tree is strewn with a carpet of the yellow petals and is sight to behold. The tree is large and very shapely.</p> <p>These trees are in the park flanking Nanda Road (continuation of RV road) from South End to Jayanagar and several other areas of Bangalore.</p> <p>Bombax malabaricum</p> <p>Common Name :Red Silk Cotton Origin :India and Malaya Flowering Season :January – March Vernacular Name :Booruga (Kannada)</p>	
--	--	--	---	--

## ANNEXURE:2: QUERRIES AND ANSWERS THROUGH VARIOUS WAYS:

			<p>Brief Description:The tree is a blaze of colour and completely leafless when in bloom. The numerous, large, cup-shaped, crimson flowers are very attractive. The flowers attract a variety of birds and there is a cacophony of bird calls. Depending on where the tree grows the birds that visit the flowers also vary. Soon after, large green fruits dangle from the tree which turn brown ejecting the soft cotton attached to the seeds.</p> <p>This is an indigenous, fast growing tree and grows in most areas except in the very arid areas. Virtually every part of the tree is known to have medicinal value. There are trees in Lalbagh (near West Gate and near the Rose Garden), Banashankari II Stage and other areas.</p> <p>I have personally enjoyed observing birds near these trees in forested areas (particularly Anamalais). Whitebellied Treepie, Hill Myna, Parakeets, Drongos, Orioles, Thrushes, Babblers, Blackbirds and a whole lot more can be seen to the accompaniment of their cacophony. The next time you happen to be in the jungles during the flowering season of this tree, just try your luck. Pongamia glabra</p> <p>Common Name :Pongam/Indian Beech Tree Origin :India, Seychelles, Malaya, Ceylon, tropical Australia &amp; China besides some Pacific islands. Flowering Season :January – March Vernacular Name :Honge (Kannada)</p> <p>Brief Description:This native tree has a wide distribution. It is nearly evergreen and hardy.Pongam is medium sized tree. Widely grown due to the many advantages of the species. It can be grown with ease, it is not very slow growing, and has a dense canopy. Apart from the many other uses of the tree, it has been planted in the past for shade along roadsides. The small flowers (similar to the flowers of the pea plant) vary in colour from white to pale purple. It attracts many butterflies like the Cerulean, Blue Tiger and Common Crows. Many of these trees are just coming into bloom in the city.</p> <p>When these trees sport fresh leaves of a very appealing and enjoyable shade of green it is a pleasure to watch them.</p> <p>Lagerstroemia flos-reginae</p>	
--	--	--	--	--

## ANNEXURE:2: QUERRIES AND ANSWERS THROUGH VARIOUS WAYS:

			<p>Common Name :Queen’s Flower  Origin :India (W Ghats). Also distributed in Ceylon, Burma, Malay Peninsula, Australia and China.  Flowering Season :March – May  Vernacular Name :Hole dasavala</p> <p>Brief Description:This species is also known by the name ‘Pride of India’. It certainly merits both the common names attributed to it. The tree, when it puts forth its many inflorescences, each about a foot long, their colour varying from pink to purple, is a grand sight indeed! The tree attains majestic proportions in well-watered areas, particularly on river and streambeds. Away from water the growth is stunted making it quite suitable for planting in gardens, parks and on roadsides. Never is the tree leafless. The leaves are shed, few at a time and turn red or yellow prior to dropping off, on a scale never equalling the grandeur of temperate trees in autumn. The tree can be easily identified even after the flowering season by the smooth bark (it peels like in guava) and the woody fruits which stay on the tree for a long time – some times even up to the next flowering season.</p> <p>The trees on M.G.Road (near Brigade Rd. junction) have now given way to the Metro silently. But there are trees in the premises of the City Railway Station, in the vicinity of the High Court and Vidhana Soudha, in Lalbagh and near South End (near RNR choultry) and many other areas in the city.</p> <p>Couroupita guianensis</p> <p>Common Name :Cannon Ball Tree  Origin :Tropical South America and West Indies  Flowering Season :Almost throughout the year  Vernacular Name :Nagalingam</p> <p>Brief Description:A truly amazing tree. The tree does not grow branches that reach out from the straight trunk. It bears large, showy flowers, almost through the year, on the trunk and not on branches like most other trees. Though a native of tropical South America, it is considered sacred in India (the structure of the flower is likened to the ‘Shiva linga’, complete with the snake providing shade). The tree also produces globular, brown, woody fruits of an astonishing size, almost the size of a human head! There is also a strong albeit pleasant smell.</p>	
--	--	--	--	--

## ANNEXURE:2: QUERRIES AND ANSWERS THROUGH VARIOUS WAYS:

			<p>A tree in Cubbon Park (near the counter where tickets are issued for boating) is trulyspectacular. There are also trees in Lalbagh, on Infantry Road (near Gem Plaza) and other parts of the city.</p> <p><i>Kigelia pinnata</i></p> <p>Common Name :Sausage Tree Origin :Mozambique and parts of tropical Africa Flowering Season :March to June Vernacular Name :Sasega mara</p> <p>Brief Description :Bats are known to pollinate the deep liver / maroon coloured flowers of the Sausage Tree. A few of these foul smelling flowers are borne on a thick long stalk which hangs from branches. The fruits, which give the tree its common name, are sausage (cylindrical) shaped, large, woody and hang on long thick stalks. The Sausage tree is evergreen. It also has a shapely crown and ideal for parks and roadside planting. This tree belongs to the same family as that of the Jacaranda and Tabebuias.</p> <p><i>Grevillea robusta</i></p> <p>Common Name :Silver Oak Origin :Australia Flowering Season :February – March Vernacular Name :Called silver by coffee plantation workers</p> <p>Brief description :This tree will be familiar to anyone who has visited coffee/tea estates where it is grown as shade trees. The tree perhaps gets it common name due to the pale, silvery undersides of its ornamental leaves. The orange flowers of this tree are borne in clusters. The Greyheaded Myna and Rosy Pastors can be seen visiting this tree. The tree itself is large, tall and robust. The rough bark of the Silver Oak is often used by many a small creatures like wasps, geckos, etc.</p> <p><i>Polyalthia longifolia</i></p> <p>Common Name :Mast Tree Origin :Sri Lanka Flowering Season :March – May Vernacular Name :Ashoka (Kannada)</p> <p>Brief description :Very often this tree is erroneously called Ashoka (<i>Saraca asoca</i>). The name Mast Tree describes this species better. These trees are evergreen and grow tall. In</p>	
--	--	--	--	--

## ANNEXURE:2: QUERRIES AND ANSWERS THROUGH VARIOUS WAYS:

				<p>P.longifolia the long tapering leaves are borne on short slender horizontal branches while in the case of var. pendula similar leaves are borne on drooping branches. Both are ideally suited for planting in a variety of situations. The flowers are pale green with a hint of yellow and not very prominent (particularly in pendula where the foliage conceals the flowers). Bats disperse the fruits. This tree also is the larval food plant of the Tailed Jay butterfly.</p> <p>Delonix regia</p> <p>Common Name :Gulmohur Origin :Madagascar Vernacular Name :Kattikai mara</p> <p>Brief description :Gulmohur, though a native of Madagascar, is now common all over India.</p>

39.	100 000 163 0	gautam 12333 @rediff mail.co m	medicin al plant	i am an army officer,by virtue of being posted to various places,lately i have developed interest in knowing medicinal plants and its usages in day to day life, can u pl tell me about rauwolfia serpentina(sarpagandha),where it can be found in west bengal,assam,what are its types ie red and white types,and its medicinal value,if i have this plant in my garden does its smell prevent snakes from entering house or is it a myth,pl clarify,also i want to preserve such plants , how should i go about. how to plant such plants and growing procedures.thanks	Dear Sir, I must appreciate your interest in plants.This plant is not a common plant. It is found in the forest areas. If you want to have this plant, you may have to ask for sarpagandha plant in forest nursery. Picture of this plant is available in the following link <a href="http://envis.frlht.org/bot_search.php">http://envis.frlht.org/bot_search.php</a> . Please check and then buy your plant and forward us the image for confirming the same with flowers. A common belief that the roots ward off snakes. You can try.This is a threatened plant too and management measures are being taken up.You will get more details about this plant if you visit- <a href="http://www.envis.frlht.org--data-search">www.envis.frlht.org--data search</a> .....conservation concern section. Please go through. Good luck. Regards Suma TS ENVIS Coordinator	Research queries

### SOME SAMPLE QUERRIES THROUGH MAILS AND RECIPROCATION:

#### Health Care:

**From:** raghunandan menon [mailto:vrmenoning@gmail.com]  
**Sent:** Wednesday, May 02, 2012 7:38 PM  
**To:** suma.tagadur@frlht.org  
**Subject:** Medicinal plants

Dear Sir,

I got your e-mail ID from the web site.

A bit of back ground. My name is V R Menon, 55 year old retired private sector employee, resident of Kerala and a bladder cancer patient. I was looking at my options of using medicinal plants available in India to treat myself. I understand that considerable research is being conducted in this field.

I will be very obliged if you would kindly let me know of any development that you are aware. What are the plants that can be safely consumed for fighting cancer (Tumor)? Any information shall be appreciated.

Also will you be able to help me in setting up a medicinal garden in my residential plot?.

With regards

V R Menon

### COMMUNICATION LEADING TO VISIT TO BANGALORE OFFICE:

S Joshi [mailto:poorva\_joshi@yahoo.com]  
**Sent:** Tuesday, February 21, 2012 11:50 AM  
**To:** ENVIS  
**Cc:** ganesh.babu@frlht.org; suma.tagadur@frlht.org  
**Subject:** Thanks from Poorva

Dear Suma mam,

Thanks For all your support and guidance during my visit to FRLHT, I-AIM ,Bangalore.As A teacher, I could know that there is tremendous potential which can be used to link the pharmacognocny research and Msc projects and even small base generating projects by BSc students.As a owner of Bio Concepts , I could gather the know how in promotion and awareness programe that I am interested

## ANNEXURE:2: QUERRIES AND ANSWERS THROUGH VARIOUS WAYS:

in.As a facilitator for projects, I got right books especially Dr. Ved sir's book on trade and Ethno medicinal garden by NM Ganesh Babu.Which will also help guide myself in blog writing activity.I enjoyed full day at FRLHT, typical lunch with all of you ,cobra sighting and Cat-papad interaction and big portion of prasadam. 😊 I appreciate the open culture at FRLHT that could accomodate an outsider like me . Library is amazing.Please keep in the loop for school program updates.

special request for sending all those photographs taken by You.Thanks for Dr. Ashwini godbole's mobile number. I called her and talked to her after 12 years.. we planned to meet soon.

Thanks to everyone.

Regards,  
Poorva

**Subject:** Re: Regarding permission to visit FRLHT.

Dear Suma madam,  
Thanks a lot for your support and suggestion.

My hotel in Bangalore is bang on MG road.  
I am going to book the car for that day .

So please can you guide me on following --

- 1.What is the best route to come to FRLHT?
- 2.On 17 th FEB.I will be reaching in the hotel in the morning around 9.00 am  
so At what time should I come and visit?
- 3.I am interested in Buying some publication related to medicinal plant and conservation.Where should I Buy them?
- 5.As suggested by you I would love to see the Laboratory. Would love to know in what kind of projects and proposals FRLHT is interested?
- 6.As In pune I am promoting home herbal garden and conservation related information through talks and seminars and projects.. please connect me to related scientists or eminent personalities from ENVIS.
- 7.I will send my biodata and BioConcepts agenda to you so that its easier to understand what I do?
- 8.I am writing a blog on medicinal plants and their uses in kitchen in Marathi. will send the link of wordpress also.
- 9.Am interested in documentation of conservation practices for important medicinal plant .. so I want to know more about How should I go for that.?

### Images for ARKive

**From:** George Bradford [mailto:[George.Bradford@wildscreen.org.uk](mailto:George.Bradford@wildscreen.org.uk)]  
**Sent:** Tuesday, September 13, 2011 5:13 PM  
**To:** ([envis@frlht.org](mailto:envis@frlht.org))  
**Subject:** Images for ARKive

Dear Sir/Madam,I hope you do not mind me contacting you but in searching the internet for images of *Enicostema axillare* I found a fantastic image on your [webpage](#) which I would be interested in using for ARKive, if you would like to become involved.ARKive - [www.arkive.org](http://www.arkive.org) - is a unique conservation initiative.

Films, photographs and audio recordings of the world's animals, plants and fungi are being gathered into one centralised digital library. To date we have created digital multi-media profiles for nearly 8,000 species, digitising and storing more than 50,000 still images and over 100 hours of moving footage. These important audio-visual records are being preserved and maintained for the benefit of future generations and are being made available via the ARKive website.

□ It is ARKive's current aim to compile audio-visual records for the 17,000-plus species currently threatened with extinction, according to the World Conservation Union's (IUCN) Red List of Threatened Species. □ We are looking for media (moving footage, still images, audio) to depict each species' life history as comprehensively as possible. In order for us to achieve this aim we need help from as wide a variety of donors as possible and would like to be able to add you to our list of contributors.

□ The ARKive website acts as a showcase for image providers, displaying copyright and contact details with every image and links to each media donor's own web activities. See examples of species which have been ARKived at [www.arkive.org](http://www.arkive.org). Please let me know if you would like to contribute to ARKive or if you have any queries.

Best wishes,George
